

# Belize

## Medical Summary

The health risk information presented here is summarized from Shoreland Travax®, a decision-support tool used by health care providers to perform a detailed health risk analysis based on specific locations, individual travel styles, and traveler risk behaviors. Travax provides practitioners current, independently researched malaria risk and prevention recommendations in a map-based format that goes beyond the annual WHO and US CDC statements included here. Not included here are current reports from Travax of disease outbreaks or environmental events that may pose elevated risks to travelers' health and safety. The Providers section of this site offers a directory of health care providers who utilize Shoreland Travax for travel health counseling. Learn more about the detailed reports and maps available from these practitioners (includes links to samples).

### General Information

Belize is a developing nation classified as upper middle income. Located in Central America (south of Mexico and north of Guatemala), the climate classifications range from humid equatorial (no dry season) in the south to humid equatorial (long dry season) in the north.

### Vaccinations

**Routine vaccinations** are essential due to a persistent global rise of vaccine-preventable diseases (especially markedly high rates of diphtheria, pertussis, and measles). Prior to travel, travelers should be up-to-date with the age-appropriate and risk-based routine vaccinations recommended by their home country, which may include:

- COVID-19
- *H. influenzae* type B (Hib)
- Hepatitis A
- Hepatitis B: Protection is especially important for those at increased risk.
- Herpes zoster
- Human papillomavirus
- Influenza
- Measles, mumps, rubella: A single early dose is recommended for travelers aged 6-11 months.
- Meningococcal
- Pneumococcal
- Polio
- Rotavirus
- Tetanus, diphtheria, pertussis: Tdap preferred; consider an early pertussis booster for high-risk travelers.
- Varicella

### Yellow Fever

- *Requirement:* No requirement for any traveler as of November 18, 2022 per the 2022 online update of *International Travel and Health*.

### Other Vaccines

Depending on your itinerary, your personal risk factors, and the length of your visit, your health care provider may offer you vaccination against chikungunya, dengue, rabies, or typhoid fever.

### Malaria

The following is current information as reported by the World Health Organization (WHO) and the US Centers for Disease Control (CDC):

**WHO—International Travel and Health (current online update, Country List)**

Country certified malaria-free by WHO in 2023.

**Note:** the current ITH online update does not reflect this information.

## **CDC—*Health Information for International Travel* (current online edition)**

No malaria transmission.

## **Other Concerns**

### **Travelers' Diarrhea**

High risk exists throughout the country, including in deluxe accommodations. Community sanitation and food safety measures are generally inadequate. Some itineraries (e.g., remote destinations, austere accommodations) and activities (e.g., ecotourism, eating street or local-market food) further increase risk.

Travelers should observe food and beverage precautions, which reduce the likelihood of illness.

Travelers should carry loperamide for self-treatment of diarrhea and, if risk is moderate to high, an antibiotic to add if diarrhea is severe. Consult a knowledgeable health care provider regarding which antibiotic is appropriate for you and most effective for your destination.

### **Other Food-Borne Illnesses**

Precautions to prevent brucellosis, seafood poisoning may be needed.

### **Insect- and Arthropod-Borne Diseases**

Chagas' disease (American trypanosomiasis), leishmaniasis, West Nile virus, Zika may pose a risk. Personal protective measures are important.

### **Other Disease and Health Risks**

Additional concerns include helminths, leptospirosis, marine hazards, New World screwworm (myiasis), sexually transmitted infections, snakebites, tuberculosis.

## **Safety and Security**

### **Key Safety Risks**

- Road conditions
- Public transportation
- Maritime safety
- Petty crime
- Heightened crime risk for women
- Heightened crime risk for LGBTQ+ travelers
- Food and beverage spiking
- Theft of vehicles
- Scams
- Natural disasters

### **Key Security Threats**

- Violent crime

## **Emergency Contacts**

The national emergency numbers are 911 and 90; the lines may not be answered.
