

Colombia

Medical Summary

The health risk information presented here is summarized from Shoreland Travax[®], a decision-support tool used by health care providers to perform a detailed health risk analysis based on specific locations, individual travel styles, and traveler risk behaviors. Travax provides practitioners current, independently researched malaria risk and prevention recommendations in a map-based format that goes beyond the annual WHO and US CDC statements included here. Not included here are current reports from Travax of disease outbreaks or environmental events that may pose elevated risks to travelers' health and safety. The Providers section of this site offers a directory of health care providers who utilize Shoreland Travax for travel health counseling. Learn more about the detailed reports and maps available from these practitioners (includes links to samples).

General Information

Colombia is a developing nation classified as upper middle income. Located in northwestern South America along the Pacific Ocean and Caribbean Sea (north of Peru and south of Venezuela), the climate is extremely diverse with classifications that range from humid equatorial (no dry season) to dry (semi arid), with cooler temperatures in some high-altitude areas.

Vaccinations

Routine vaccinations are essential due to a persistent global rise of vaccine-preventable diseases (especially markedly high rates of diphtheria, pertussis, and measles). Prior to travel, travelers should be up-to-date with the age-appropriate routine vaccinations recommended by their home country, which may include: COVID-19; *H. influenzae* type B (Hib); hepatitis A; hepatitis B; herpes zoster; human papillomavirus; influenza; measles, mumps, rubella (a single early dose is recommended for travelers aged 6-11 months); meningococcal; pneumococcal; polio; rotavirus; tetanus, diphtheria, pertussis (Tdap preferred; consider an early pertussis booster for high-risk travelers); varicella.

Yellow Fever

An official yellow fever vaccination certificate may be required depending on your itinerary. Vaccination is usually recommended if you'll be traveling in areas where there is risk of yellow fever transmission.

- **Requirement:**

A certificate proving yellow fever (YF) vaccination is required for travelers aged ≥ 1 year coming from Angola, Brazil, Democratic Republic of the Congo, and Uganda. This also applies to airport transit stops (no exit through immigration checkpoint) longer than 12 hours in these countries.

Supplementary information: Colombia requires proof of vaccination prior to entering the national nature parks of Amacayacu, Cahuinarí National Park, Corales del Rosario and San Bernardo, Cordillera de Los Picachos, El Tuparro, Farallones de Cali, Gorgona, La Paya, Las Orquídeas National Park, Macuira, Old Providence McBean Lagoon, Paramillo National Park, Puinawai, Río Puré National Park, Sanquianga, Serranía de Chiribiquete, Serranía de los Churumbelos, Sierra Nevada de Santa Marta, Tayrona, Tinigua, Uramba Bahía Málaga, Utria, and Yaigojé Apaporis; the flora and fauna sanctuaries of Ciénaga Grande de Santa Marta Sanctuary, El mono Hernández Cork Forest, Los Colorados, Los Flamencos, and Malpelo; Orito Ingi-Ande; and Salamanca Park.

Proof of vaccination (administered ≥ 10 days prior to travel) is required when using public transportation services in the country; however, a signed declaration assuming direct responsibility for any possible infection of themselves and/or others is acceptable if a vaccination certificate is not available or not yet valid. Proof of vaccination (or a signed declaration) should be carried at all times.

- **Official Status:** listed by WHO as a country where YF transmission risk is present.

Other Vaccines

Depending on your itinerary, your personal risk factors, and the length of your visit, your health care provider may offer you vaccination against chikungunya, dengue, mpox, rabies, or typhoid fever.

Malaria

The following is current information as reported by the World Health Organization (WHO) and the US Centers for Disease Control (CDC):

WHO—*International Travel and Health* (current online update, Country List)

(2020) Malaria risk is high in some municipalities of the departments of Antioquia, Bolívar, Cauca, Chocó, Córdoba, La Guajira, Nariño, and Risaralda. Lower level risk is also present in some municipalities of Amazonas, Caqueta, Guaviare, Guainía, Meta, Norte de Santander, Putumayo, Vaupes, and Vichada.

- Recommended prevention in risk areas: **C** – Risk of *P. falciparum* malaria. Mosquito-bite prevention plus atovaquone-proguanil or doxycycline or mefloquine chemoprophylaxis (select according to drug-resistance pattern, reported side-effects and contraindications).^{a, b}

^aAlternatively, for travel to rural areas with low risk of malaria infection, mosquito bite prevention can be combined with stand-by emergency treatment (SBET).

^bIn certain areas with multidrug-resistant malaria, mefloquine chemoprophylaxis is no longer recommended. At present, these areas include Cambodia, south-eastern Myanmar and Thailand.

WHO Country List footnote: When available, the date of the most recent update or confirmation is indicated in parentheses in the country list. If no accurate date is indicated, the most recent update or confirmation was provided prior to 2013.

CDC—*Health Information for International Travel* (current online edition)

Transmission areas

- All areas < 1,700 m (< 5,600 ft) elevation
- No malaria transmission in the cities of Bogotá (the capital), Cartagena, or Medellín

Drug resistance¹

- Chloroquine

Species

- *P. falciparum* (50%)
- *P. vivax* (50%)

Recommended chemoprophylaxis

- Atovaquone-proguanil, doxycycline, mefloquine, tafenoquine²

¹ Refers to *P. falciparum* malaria, unless otherwise noted.

² Tafenoquine can cause potentially life-threatening hemolysis in people with glucose-6-phosphate-dehydrogenase (G6PD) deficiency. Test for G6PD deficiency with a quantitative laboratory test before prescribing tafenoquine to patients.

Other Concerns

Travelers' Diarrhea

High risk exists throughout the country, with moderate risk in deluxe accommodations. Community sanitation and food safety measures are generally inadequate. Some itineraries (e.g., remote destinations, austere accommodations) and activities (e.g., ecotourism, eating street or local-market food) further increase risk.

Travelers should observe food and beverage precautions, which reduce the likelihood of illness.

Travelers should carry loperamide for self-treatment of diarrhea and, if risk is moderate to high, an antibiotic to add if diarrhea is severe. Consult a knowledgeable health care provider regarding which antibiotic is appropriate for you and most effective for your destination.

Other Food-Borne Illnesses

Precautions to prevent brucellosis, seafood poisoning may be needed.

Insect- and Arthropod-Borne Diseases

Chagas' disease (American trypanosomiasis), leishmaniasis, Oropouche fever, Rocky Mountain spotted fever, West Nile virus, Zika may pose a risk. Personal protective measures are important.

Other Disease and Health Risks

Additional concerns include air pollution, altitude illness, anthrax disease, helminths, hepatitis C, leptospirosis, marine hazards, melioidosis, schistosomiasis, sexually transmitted infections, snakebites, tuberculosis.

Safety and Security

Key Safety Risks

- Road conditions and traffic collisions
- Public transportation
- Maritime safety
- Petty crime
- Heightened crime risk for women
- Heightened crime risk for LGBTQ+ travelers
- Food and beverage spiking
- Scams
- Natural disasters

Key Security Threats

- Terrorist attacks by domestic groups
- Risk of violent civil unrest
- Risk of violent protests
- Cross-border threats in areas bordering Ecuador and Venezuela
- Explosions in public places
- Landmines/unexploded ordnance
- Violent crime
- Kidnapping, which may target foreign nationals
- Random acts of armed violence

Emergency Contacts

The national emergency number is 123; local operators do not speak English.
