Côte d'Ivoire
Medical Summary

The health risk information presented here is summarized from Shoreland Travax®, a decision-support tool used by health care providers to perform a detailed health risk analysis based on specific locations, individual travel styles, and traveler risk behaviors. Travax provides practitioners current, independently researched malaria risk and prevention recommendations in a map-based format that goes beyond the annual WHO and US CDC statements included here. Not included here are current reports from Travax of disease outbreaks or environmental events that may pose elevated risks to travelers’ health and safety. The Providers section of this site offers a directory of health care providers who utilize Shoreland Travax for travel health counseling. Learn more about the detailed reports and maps available from these practitioners (includes links to samples).

General Information
Côte d'Ivoire is a developing nation classified as lower middle income. Located in western Africa on the Gulf of Guinea (east of Guinea and west of Ghana), the climate is classified as humid equatorial (long dry season).

Vaccinations

Yellow Fever
- **Requirement:** A certificate proving yellow fever vaccination is required for all travelers aged ≥ 9 months.
- **Official Status:** listed by WHO as a country where YF transmission risk is present.

Other Vaccines
Depending on your itinerary, your personal risk factors, and the length of your visit, your health care provider may offer you vaccination against COVID-19, Ebola virus disease, hepatitis A, hepatitis B, influenza, measles, mumps, rubella, meningococcal meningitis, mpox, rabies, typhoid fever, or a one time polio booster if you haven't previously received one for travel. Routine immunizations, such as those that prevent tetanus/diphtheria or "childhood" diseases, should be reviewed and updated as needed.

Malaria
The following is current information as reported by the World Health Organization (WHO) and the US Centers for Disease Control (CDC):

**WHO—International Travel and Health (current online update, Country List)**

(2018) Malaria risk due predominantly to *P. falciparum* exists throughout the year in the entire country.
- Recommended prevention: **C** – Risk of *P. falciparum* malaria, in combination with reported chloroquine and sulfadoxine–pyrimethamine resistance. Mosquito bite prevention plus atovaquone–proguanil or doxycycline or mefloquine chemoprophylaxis (select according to reported side effects and contraindications) a
  - Alternatively, for travel to rural areas with low risk of malaria infection, mosquito bite prevention can be combined with stand–by emergency treatment (SBET).

**WHO Country List footnote:** When available, the date of the most recent update or confirmation is indicated in parentheses in the country list. If no date is indicated, the most recent update or confirmation was provided before 2013.

**CDC—Health Information for International Travel (current online edition)**

Areas with malaria: All.
- Drug resistance³: Chloroquine.
- Malaria species: *P. falciparum* 85%, *P. ovale* 5%–10%, *P. vivax* rare.
- Recommended chemoprophylaxis: Atovaquone-proguanil, doxycycline, mefloquine, or tafenoquine.⁴
  - Refers to *P. falciparum* malaria unless otherwise noted.
  - Primaquine and tafenoquine can cause hemolytic anemia in people with G6PD deficiency. Patients must be screened for
Other Concerns

Travelers' Diarrhea
High risk exists throughout the country, including in deluxe accommodations. Food and beverage precautions may reduce the likelihood of illness.

Travelers should carry loperamide for self-treatment of diarrhea and, if risk is moderate to high, an antibiotic to add if diarrhea is severe. Consult a knowledgeable health care provider regarding which antibiotic is appropriate for you and most effective for your destination.

Insect- and Arthropod-Borne Diseases
African trypanosomiasis, chikungunya, dengue, leishmaniasis, onchocerciasis, tick-bite fever, West Nile virus, Zika may pose a risk. Personal protective measures are important.

Other Disease and Health Risks
Additional concerns include anthrax disease, helminths, hepatitis C, marine hazards, melioidosis, schistosomiasis, sexually transmitted infections, snakebites, tuberculosis.

Consular Advice

The material below includes information from the US Department of State (DOS), the UK Foreign, Commonwealth & Development Office (FCO), Global Affairs Canada (GAC), and Australia’s Department of Foreign Affairs and Trade (DFAT), as well as from additional open-source material. Standard safety precautions that apply to all international travel can be found in the Library article Safety and Security.

Consular Travel Advice
Due to terrorism, ongoing violence, and the presence of armed groups, Canada (GAC) advises avoiding all travel within 50 km (31 mi) of the borders with Mali and Burkina Faso in the following regions: Folon, Bagoué, Poro, Tchologo, and Bounkani. Canada (GAC) advises reconsidering travel (or avoiding nonessential travel) within 50 km (31 mi) of the border with Liberia in the following regions: Cavally, Guémon, San-Pédro, and Tonkpi; US (DOS), UK (FCO), and Australia (DFAT) have more limited warnings.

Terrorism Risk
Risk of attack by transnational terrorist groups exists throughout the country (including Grand-Bassam), especially in border areas. Targets may include domestic and international organizations and businesses; public places and events, including those frequented by tourists; and transportation systems.

Crime
High risk of violent crime (armed robbery, home invasion, and carjacking) exists throughout the country, especially in Abidjan (particularly in Abobo, Adjame, and Yopougon districts and in the neighborhoods of Trechiville and Plateau, including on bridges to and from Plateau) and on the main road from Yamoussoukro to Korhogo (Savanes District).

Moderate risk of petty crime exists throughout the country, especially in Abidjan.

Civil Unrest
Protests and demonstrations occur throughout the country and have the potential to turn violent without warning. Bystanders are at risk of harm from violence or from the response by authorities. Disruption to transportation, free movement, or the ability to carry out daily activities may occur.

Unsafe Areas
Armed conflict occurs and a dangerous security environment exists in areas bordering Liberia.

Water Safety
Hazardous water conditions (including currents, tides, and undertows) may occur, especially in Grand Bassam. Heed posted warnings and avoid beaches that are not patrolled. Do not swim alone or after dark and do not walk on any beach after dark.

**Transportation Safety**

Significant risk of traffic-related injury or death exists. The road traffic death rate is more than 24 per 100,000 population, the highest risk category. Carefully assess the safety of transportation options before any road travel.

- Speed laws are poorly enforced.
- Seat belt laws are poorly enforced.
- Drunk driving laws are poorly enforced.
- Structural standards for vehicles may not meet international standards.

**Natural Disasters**

The rainy season is from May through November. Floods, mudslides, and landslides may occur.

**Consular Information**

Selected Embassies or Consulates in Côte d'Ivoire
