

Greece

Medical Summary

The health risk information presented here is summarized from Shoreland Travax[®], a decision-support tool used by health care providers to perform a detailed health risk analysis based on specific locations, individual travel styles, and traveler risk behaviors. Travax provides practitioners current, independently researched malaria risk and prevention recommendations in a map-based format that goes beyond the annual WHO and US CDC statements included here. Not included here are current reports from Travax of disease outbreaks or environmental events that may pose elevated risks to travelers' health and safety. The Providers section of this site offers a directory of health care providers who utilize Shoreland Travax for travel health counseling. Learn more about the detailed reports and maps available from these practitioners (includes links to samples).

General Information

Greece is an advanced economy classified as high income. Located on the Mediterranean Sea (southeast of Albania and west of Turkey), the climate is classified as dry summer.

Vaccinations

Routine vaccinations are essential due to a persistent global rise of vaccine-preventable diseases (especially markedly high rates of diphtheria, pertussis, and measles). Prior to travel, travelers should be up-to-date with the age-appropriate and risk-based routine vaccinations recommended by their home country, which may include:

- COVID-19
- *H. influenzae* type B (Hib)
- Hepatitis A
- Hepatitis B: Protection is especially important for those at increased risk.
- Herpes zoster
- Human papillomavirus
- Influenza
- Measles, mumps, rubella: A single early dose is recommended for travelers aged 6-11 months.
- Meningococcal
- Pneumococcal
- Polio
- Rotavirus
- Tetanus, diphtheria, pertussis: Tdap preferred; consider an early pertussis booster for high-risk travelers.
- Varicella

Depending on your itinerary, your personal risk factors, and the length of your visit, your health care provider may offer you vaccination against mpox, rabies, or tick-borne encephalitis.

Malaria

The following is current information as reported by the World Health Organization (WHO) and the US Centers for Disease Control (CDC):

WHO—International Travel and Health (current online update, Country List)

(2017) Very limited Malaria risk (*P. vivax* only) may exist from May through October in certain high-risk agricultural areas.

- Recommended prevention in high-risk agricultural areas: **A** - Very limited risk of malaria transmission. Mosquito-bite prevention only.

WHO Country List footnote: When available, the date of the most recent update or confirmation is indicated in parentheses in the country list. If no accurate date is indicated, the most recent update or confirmation was provided prior to 2013.

CDC—Health Information for International Travel (current online edition)

Transmission areas

- Rare, local transmission in agricultural areas, associated with imported malaria (May–November)
- No malaria transmission in tourist areas

Drug resistance¹

- Not applicable

Species

- *P. vivax* (100%)

Recommended chemoprophylaxis

- None

¹ Refers to *P. falciparum* malaria, unless otherwise noted.

Other Concerns

Travelers' Diarrhea

Minimal risk (comparable to that in other industrialized countries) exists throughout the country. Community sanitation and food safety measures are generally good, and health concerns related to food and beverage consumption are minimal. Risk for viral gastroenteritis (e.g., norovirus) may be elevated based on season, traveler itinerary, and/or level of community transmission.

Travelers should carry loperamide for self-treatment of diarrhea and, if risk is moderate to high, an antibiotic to add if diarrhea is severe. Consult a knowledgeable health care provider regarding which antibiotic is appropriate for you and most effective for your destination.

Other Food-Borne Illnesses

Precautions to prevent brucellosis, seafood poisoning may be needed.

Insect- and Arthropod-Borne Diseases

Leishmaniasis, Lyme disease, Rocky Mountain spotted fever, West Nile virus may pose a risk. Personal protective measures are important.

Other Disease and Health Risks

Additional concerns include air pollution, anthrax disease, Crimean-Congo hemorrhagic fever, hantavirus, hepatitis C, leptospirosis, marine hazards, sexually transmitted infections.

Safety and Security

Key Safety Risks

- Traffic collisions
- Petty crime
- Heightened crime risk for women
- Food and beverage spiking
- Scams
- Natural disasters

Key Security Threats

- Risk of terrorist attacks by transnational groups
- Risk of violent civil unrest
- Risk of violent protests
- Occasional violent crime

Emergency Contacts

The national emergency number is 112.
