

Yemen

Medical Summary

The health risk information presented here is summarized from Shoreland Travax[®], a decision-support tool used by health care providers to perform a detailed health risk analysis based on specific locations, individual travel styles, and traveler risk behaviors. Travax provides practitioners current, independently researched malaria risk and prevention recommendations in a map-based format that goes beyond the annual WHO and US CDC statements included here. Not included here are current reports from Travax of disease outbreaks or environmental events that may pose elevated risks to travelers' health and safety. The Providers section of this site offers a directory of health care providers who utilize Shoreland Travax for travel health counseling. Learn more about the detailed reports and maps available from these practitioners (includes links to samples).

General Information

Yemen is a developing nation classified as low income. Located in the Middle East (west of Oman and south of Saudi Arabia), the climate is classified as dry (arid), with cooler temperatures in some high-altitude areas.

Vaccinations

Routine vaccinations are essential due to a persistent global rise of vaccine-preventable diseases (especially markedly high rates of diphtheria, pertussis, and measles). Prior to travel, travelers should be up-to-date with the age-appropriate routine vaccinations recommended by their home country, which may include: COVID-19; *H. influenzae* type B (Hib); hepatitis A; hepatitis B; herpes zoster; human papillomavirus; influenza; measles, mumps, rubella (a single early dose is recommended for travelers aged 6-11 months); meningococcal; pneumococcal; polio; rotavirus; tetanus, diphtheria, pertussis (Tdap preferred; consider an early pertussis booster for high-risk travelers); varicella.

Depending on your itinerary, your personal risk factors, and the length of your visit, your health care provider may offer you vaccination against chikungunya, cholera, dengue, rabies, typhoid fever, or a one time polio booster if you haven't previously received one for travel.

Malaria

The following is current information as reported by the World Health Organization (WHO) and the US Centers for Disease Control (CDC):

WHO—International Travel and Health (current online update, Country List)

(2022) Malaria risk due predominantly to *P. falciparum* exists throughout the year, but mainly from September through February, in the entire country below 2000 m. There is no risk in Sana'a city. Malaria risk on Socotra Island is very limited.

- Recommended prevention in risk areas: **C** – Risk of *P. falciparum* malaria. Mosquito-bite prevention plus atovaquone-proguanil or doxycycline or mefloquine chemoprophylaxis (select according to drug-resistance pattern, reported side-effects and contraindications).^{a, b}

^aAlternatively, for travel to rural areas with low risk of malaria infection, mosquito bite prevention can be combined with stand-by emergency treatment (SBET).

^bIn certain areas with multidrug-resistant malaria, mefloquine chemoprophylaxis is no longer recommended. At present, these areas include Cambodia, south-eastern Myanmar and Thailand.

- Recommended prevention on Socotra Island: **A** – Very limited risk of malaria transmission. Mosquito bite prevention only.

WHO Country List footnote: When available, the date of the most recent update or confirmation is indicated in parentheses in the country list. If no accurate date is indicated, the most recent update or confirmation was provided prior to 2013.

CDC—Health Information for International Travel (current online edition)

Transmission areas

- All areas < 2,000 m (< 6,500 ft) elevation
- No malaria transmission in Sana'a (the capital)

Drug resistance¹

- Chloroquine

Species

- *P. falciparum* (primarily)
- *P. malariae*, *P. ovale*, and *P. vivax* (less commonly)

Recommended chemoprophylaxis

- Atovaquone-proguanil, doxycycline, mefloquine, tafenoquine²

¹ Refers to *P. falciparum* malaria, unless otherwise noted.

² Tafenoquine can cause potentially life-threatening hemolysis in people with glucose-6-phosphate-dehydrogenase (G6PD) deficiency. Test for G6PD deficiency with a quantitative laboratory test before prescribing tafenoquine to patients.

Other Concerns

Travelers' Diarrhea

High risk exists throughout the country, including in deluxe accommodations. Community sanitation and food safety measures are generally inadequate. Some itineraries (e.g., remote destinations, austere accommodations) and activities (e.g., ecotourism, eating street or local-market food) further increase risk.

Travelers should observe food and beverage precautions, which reduce the likelihood of illness.

Travelers should carry loperamide for self-treatment of diarrhea and, if risk is moderate to high, an antibiotic to add if diarrhea is severe. Consult a knowledgeable health care provider regarding which antibiotic is appropriate for you and most effective for your destination.

Other Food-Borne Illnesses

Precautions to prevent brucellosis, seafood poisoning may be needed.

Insect- and Arthropod-Borne Diseases

Leishmaniasis, onchocerciasis, West Nile virus may pose a risk. Personal protective measures are important.

Other Disease and Health Risks

Additional concerns include Crimean-Congo hemorrhagic fever, helminths, hepatitis C, leptospirosis, marine hazards, schistosomiasis, sexually transmitted infections, snakebites, tuberculosis.

Safety and Security

Key Safety Risks

- Road conditions
- Public transportation
- Domestic and/or international air travel
- Maritime safety
- Petty crime
- Heightened crime risk for women
- Theft of vehicles
- Scams
- Arbitrary arrest/unlawful detention

Key Security Threats

- Armed conflict
- Terrorist attacks by domestic and/or transnational groups, which may target foreign nationals

- Risk of violent civil unrest
- Risk of violent protests
- Explosions in public places
- Landmines/unexploded ordnance
- Violent crime
- Kidnapping/hostage taking, which may target foreign nationals
- Random acts of armed violence
- Piracy

Emergency Contacts

The national emergency number is 199; local operators do not speak English.
